CSC 211: Computer Programming Multidimensional Arrays

Michael Conti

Department of Computer Science and Statistics University of Rhode Island

Spring 2023

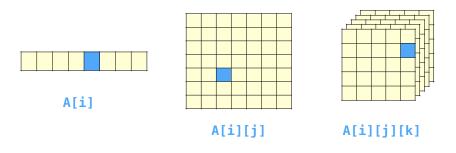

Original design and development by Dr. Marco Alvarez

Arrays, of any dimension, are statically allocated in memory with a size calculated at compile time. That is, their size is **fixed** and **cannot** be changed later.

Multidimensional Arrays

- Generalization of arrays to multiple dimensions
 e.g. matrices, tensors
- Each element can be accessed using its corresponding **indices**

Modern machine learning **Fully-Connected Fully-Connected** Neural Network Conv 2 Conv 1 ReLU activation Convolution Convolution (5 x 5) kernel (5 x 5) kernel Max-Pooling Max-Pooling valid padding valid padding (2×2) (2×2) n2 channels n1 channels n1 channels $(24 \times 24 \times n1)$ (12 x 12 x n1) (8 x 8 x n2) $(28 \times 28 \times 1)$ OUTPUT n3 units https://towardsdatascience.com/a-comprehensive-guide-to-convolutional-neural-networks-the-eli5-way-3bd2b1164a53

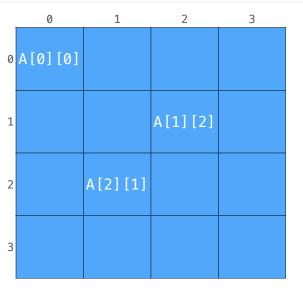

Declaration of 2D arrays

```
// array declaration by specifying size
int matrix1[10][10];

// can also declare an array of
// user specified size
int n = 8;
int matrix2[n][n];

// can declare and initialize elements
double matrix3[2][2];
matrix3 = { {10.0, 20.0}, {30.0, 40.0} };
```

Indexing 2D arrays

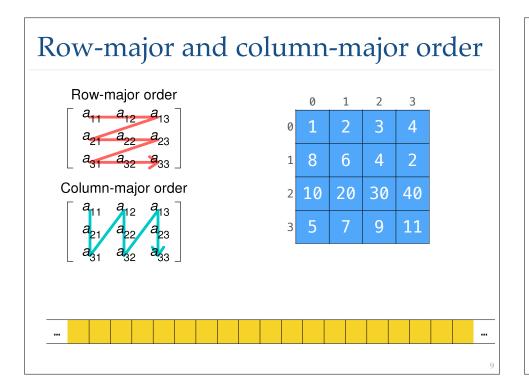

Indexing 2D arrays

Individual elements can be accessed by using the subscription operator []

```
int matrix2[3][3];
for (int i = 0 ; i < 3 ; i ++) {
    for (int j = 0 ; j < 3 ; j ++) {
        matrix[i][j] = (j + 1) + i * 3;
    }
}</pre>
```

How are these arrays stored in memory?

- In computing, row-major order and column-major order are two methods for storing multidimensional arrays as contiguous blocks of memory
 - ✓ row-major order is used in C, C++, Objective-C (for C-style arrays), PL/I, Pascal, Speakeasy, SAS, ...
 - column-major order is used in Fortran, MATLAB, GNU Octave, S-Plus, R, Julia, ...
- Alternatively, neither row-major or column-major approaches are also used (non-contiguous blocks)
 - Java, C#, CLI, .Net, Scala, Swift, Python, Lua, ...

Question

How many bytes are these arrays using in memory?
int array[100000];

int matrix[1000][1000];

double tensor[1000][1000][1000];

10

Question

Write a program that reads in the value of n, and prints the identity matrix of size n x n?

Multidimensional arrays and functions

- The first array size need not be specified
- The second (and any subsequent) must be given
- · Example:

```
int foo(int list[][100], int rows, int cols);
```

size is required so the compiler can calculate the memory addresses of individual elements

https://stackoverflow.com/questions/12813494/why-do-we-need-to-specify-the-column-size-when-passing-a-2d-array-as-a-parameter

Question

• Write a function that adds two 2D matrices?
